

JavaScript Basics Exercises

Complete the following exercises. Difficulty increases from Easy to Hard.

Question 1: Variables

Create `studentName='John'`, `age=15` and `isStudent=true`. Print all three using `console.log()`.

Question 2: Functions

Create a function `multiply(a,b)` that returns the multiplication of two numbers. Test it with `multiply(5,4)`.

Question 3: Arrow Functions

Rewrite:

```
function greeting(name){ return 'Hello '+name; }
```

using an arrow function.

Question 4: Arrays & Objects

Create an array named `books`. Each book has `title`, `author` and `price`. Add three books and print every title.

Question 5: map()

Given `const numbers=[3,6,8,10,12];`

Use `map()` to create a new array where every number is multiplied by 2.

Question 6: filter()

Given students with scores, use `filter()` to display only students whose score is 80 or higher.

Question 7: DOM Basics

Create an HTML page with one input, one button and one paragraph. When the button is clicked, display the input text inside the paragraph.

Question 8: DOM + Arrays

Create one input, one button and one `ul`. Each click adds the input into an array and displays every item as an `li`.

Question 9: DOM + Objects

Create Name and Age inputs. Store each student as an object and display 'John (15)' style output.

Question 10: Mini Project

Build a Student Manager with Add Student, display all students and a Delete button for each.

Bonus: Edit, sort alphabetically, show total students, prevent duplicates.
